

SUSTRACCIÓN DE FRACCIONES HOMOGÉNEAS

Ejercicios para Resolver

Ejercicios:

$\frac{4}{9} - \frac{1}{9} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$	$\frac{42}{9} - \frac{34}{9} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$
$\frac{12}{15} - \frac{8}{15} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$	$\frac{19}{5} - \frac{12}{5} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$
$\frac{17}{20} - \frac{12}{20} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$	$\frac{15}{8} - \frac{12}{8} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$
$\frac{42}{50} - \frac{38}{50} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$	$\frac{22}{19} - \frac{13}{19} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$
$\frac{13}{21} - \frac{2}{21} = \frac{\quad}{\quad} = \frac{\quad}{\quad}$	$\frac{14}{13} - \frac{6}{13} = \frac{\quad}{\quad} = \frac{14}{\quad}$

Une mediante flechas las restas con sus resultados:

$\frac{7}{2} - \frac{4}{2}$	$\frac{4}{9}$	$\frac{9}{8}$	$\frac{11}{7} - \frac{2}{7}$
$\frac{5}{9} - \frac{1}{9}$	$\frac{4}{10}$	$\frac{6}{4}$	$\frac{13}{8} - \frac{4}{8}$
$\frac{7}{10} - \frac{3}{10}$	$\frac{3}{2}$	$\frac{9}{7}$	$\frac{11}{6} - \frac{8}{6}$
$\frac{12}{5} - \frac{3}{5}$	$\frac{9}{5}$	$\frac{3}{6}$	$\frac{9}{4} - \frac{3}{4}$

Escribo dentro del paréntesis (V) si el resultado es verdadero y (F) si es falso:

- A. $\frac{10}{3} - \frac{10}{5} = \frac{2}{5} \longrightarrow (\quad)$
- B. $\frac{8}{8} - \frac{2}{5} = \frac{6}{8} \longrightarrow (\quad)$
- C. $\frac{15}{10} - \frac{9}{10} = \frac{6}{10} \longrightarrow (\quad)$
- D. $\frac{11}{4} - \frac{1}{4} = \frac{10}{4} \longrightarrow (\quad)$
